

GRAVITYJOE

no-gravity pneumatic system

MADE IN
ITALY

gravityjoe.com

GravityJoe®

GravityJoe® takes inspiration from the robotic and automation industry. It's the first pneumatic balancer designed and patented to be installed on any aerial platform, allowing operators to work with agility and safety at height. This innovative machinery has been conceived with the aim of relieving the worker from supporting heavy tools for long periods, resetting their weight as a result.

This leads to a significant reduction in physical effort, safeguarding the worker's health and guaranteeing a tangible decrease of accident ratios. Last but not least, its use results in an increase in production performance and work quality.

WHO WE ARE

Marea Srl, part of the META., has been involved in the rental of lifting machinery for construction since 1976. Marea Srl doesn't just deal with repairs, maintenance and spare parts, as it also develops special tools such as GravityJoe®.

The listed activities have led the company to constant growth and international visibility. Furthermore, Marea Srl has always been alert towards customer needs and market dynamics. To date it's a company capable of combining instinct and innovation with strong determination, pursuing the aim of achieving professional excellence in research and new technology development.

The synthesis of all this leads to GravityJoe®, a groundbreaking patented project which is 100% Made in Italy. It stands out for reliability, work safety and performance. Thanks to expert engineering advice, GJ was designed thanks to the combination of industrial experience, application case-studies, strong dedication and insight during its development phases; not mention the valuable contribution provided by our high profile partners and customers.

GravityJoe®
*Performance and safety combined
in a revolutionary working concept.*
